

PCI DSS COMPLIANCY

Help me maintain a vulnerability management programme, implement strong access control measures, monitor and test networks and maintain an information security policy

Step 3. PCI Security Management

Once PCI compliancy has been achieved, it's important to keep up the momentum and controls that have been put in place.

Left alone and without continuous monitoring, ongoing vulnerability assessments, staff awareness training and security updates, your compliancy can soon slip away. However, with current financial constraints upon organisations, many will believe it to be uneconomic to manage their security risks effectively. In many cases, IT staff are already stretched and a full time security team and tool sets cannot be justified. Pasporte's Virtual ISM Service provides an affordable way of maintaining your InfoSec responsibilities and managing risks.

Pasporte can provide on-going Security and Compliance Management via our qualified Security Managers as and when you require it. Typically, once achieved, PCI compliancy can be monitored and maintained with an average of once a month visits from our Security Managers. A small price to pay for complete peace of mind.

A cost effective permanent security function

Pasporte's Virtual Security Manager service provides a truly cost-effective way of maintaining your PCI Compliancy. Acting as an extension to your own staff, the service provides email and telephone support (during office hours) and a number of on-site days to suit that can be either pre-scheduled or called off as necessary. The service provides a permanent security function within your company and ensures risks and incidents are reduced. We will provide monthly security management reports, identifying performance against pre-agreed PCI performance indicators.

What are the deliverables?

- On-site support - as and when required, tailored for you
- Email and phone support (office hours)
- Monthly vulnerability scan (internet facing and internal)

- Change and project risk assessments
- Security incident escalation, response and co-ordination
- Pro-active InfoSec risk management
- Consultancy - both IT and business level
- Infosec audit plan management - vulnerability/pen testing
- Serve on customer's IT/Data Governance Committees
- Monthly reports showing adherence to key indicators
